

TM

Overview

The TM1 mug press by Secabo is ideal for comfortably performing sublimation transfers on ceramic mugs and other similar objects. The Secabo TM1 heat press is suitable for novice and professional users, and equipped with a digital controller that allows for fast and safe operation. Pressure can easily be adjusted via a hand wheel. Optionally, there are 3 different heating elements available, including conical variants. The scope of delivery includes the mug press Secabo TM1 and a heating sleeve for cups with a diameter of 80-90 mm. The heating sleeve is designed to allow for approx. 700 transfers and can be reordered at any time, depending on the wear and tear. We recommend only turning the mug press on when it will actually be used and to avoid continuous heating.

Features

Digital controller

Time and temperature are set within one digital controller.

Variable working pressure

the pressure can easily be adjusted - depending on the technology and object

Working safely

The safety and quality of the machines is permanently controlled by German safety standards

Exchangeable heating sleeves

Exchangeable heating sleeves available - in several diameters, also conical.
